## European Technical Assessment

**ETA-16/0739  
of 30/03/2021**

### General part

**Technical Assessment Body issuing the European Technical Assessment**

Instytut Techniki Budowlanej

**Trade name of the construction product**

ESDS, EFS, EVFS, ESTS

**Product family to which the construction product belongs**

Fastening screws for metal members and sheeting

**Manufacturer**

Van Roij Fasteners Europe B.V.  
Jan Tooropstraat 16  
5753 DK Deurne, Netherlands

**Manufacturing plant(s)**

Van Roij Fasteners Europe B.V. plants

**This European Technical Assessment contains**

136 pages including 131 Annexes which form an integral part of this Assessment

**This European Technical Assessment is issued in accordance with regulation (EU) No 305/2011, on the basis of**

European Assessment Document (EAD)  
330046-01-0602 "Fastening screws for metal members and sheeting"

**This version replaces**

ETA-16/0739 issued on 30/06/2020

*This European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.*

*Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.*

## Specific Part

### 1. Technical description of the product

The fastening screws ESDS, EFS, EVFS and ESTS are the self-drilling and self-tapping screws listed in Table 1. The fastening screws are partly supplied with a metallic washer and an EPDM sealing ring. Some screws can be completed with saddle washers ESW. For details see the Annexes 1 to 130.

The fastening screw and the corresponding connections are subject to tension and shear forces.

**Table 1**

No.	Screw	Material	Annex
1	ESDS-0-Z 4.8xL	galvanized carbon steel with $\geq 12 \mu\text{m}$ of zinc coating	1, 4

## 2. Specification of the intended use in accordance with the applicable European Assessment Document (EAD)

The fastening screws are intended to be used for fastening steel sheeting to steel, aluminum or timber supporting substructures. For details see the Annexes 1 to 130. The component to be fastened is component I and the supporting structure is component II. The sheeting can either be used as wall or roof cladding or as load bearing wall and roof element. The fastening screws can also be used for the fastening of any other thin gauge metal members.

The intended use comprises fastening screws and connections for indoor and outdoor applications. Fastening screws which are intended to be used in external environments with  $\geq \text{C}2$  corrosion according to the standard EN ISO 12944-2 are made of stainless steel.

Furthermore the intended use comprises connections with predominantly static loads (e.g. wind loads, dead loads).

The provisions made in this European Technical Assessment are based on an assumed working life of the fasteners of 25 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer or Technical Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

## 3. Performances of the product and references to the methods used for their assessment

### 3.1. Performance of the product

#### 3.1.1 Mechanical resistance and stability (BWR 1)

The characteristic values of the shear resistance of connections and tension resistance of connections with the fasteners are given in Annex 1 to 130. The values were determined by tests according to EAD 330046-01-0602.

The design values shall be determined according to Annex 131 and EAD 330046-01-0602.

For the corrosion protection the rules given in EN 1993-1-3, EN 1993-1-4 and EN 1999-1-4 shall be taken into account. Fastening screw which are made of stainless steel are intended to be used in external environments  $\geq \text{C}2$  corrosion according to the standard EN ISO 12944-2.

**3.1.2. Safety in case of fire (BWR 2)**

The fastening screws are considered to satisfy the requirements of performance class A1 of reaction to fire, in accordance with the provisions of the EC Decision 96/603/EC (as amended) without the need for testing on the basis of its listing in that decision.

**3.2. Methods used for the assessment**

The assessment of products has been made in accordance with the EAD 330046-01-0602.

**4. Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

According to Decision 1998/214/EC, amended by 2001/596/EC, of the European Commission the system 2+ of assessment and verification of constancy of performance applies (see Annex V to regulation (EU) No 305/2011).

**5. Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document (EAD)**

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at the Instytut Techniki Budowlanej.

For type testing the results of the tests performed as part of the assessment for the European Technical Assessment shall be used unless there are changes in the production line or plant. In such cases the necessary type testing has to be agreed between Instytut Techniki Budowlanej and the notified body.

If both components I and II are made of S320GD the values  $V_{R,k}$  may be increased by 8,3%  
If both components I and II are made of S350GD the values  $V_{R,k}$  may be increased by 16,6%

Fastening screws for metal members and sheeting	Annex 19 of European Technical Assessment ETA-16/0739
Self-drilling screws EFS-PH-2-Z 4.8xL with pan head and washer A11, A12, Z11 or Z12	

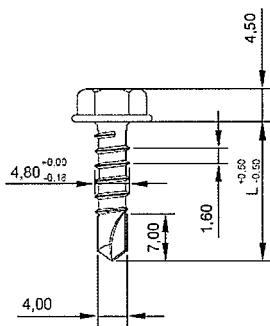

<b>Materials</b>	
Fastener:	carbon steel – SAE1022, quenched, tempered and coated: galvanized with PREMIUM coating
Washer:	A11 – aluminum washer with EPDM ring A12 – aluminum washer with EPDM ring
Component I:	S280GD, S320GD or S350GD – EN 10326
Component II:	S280GD, S320GD or S350GD – EN 10326 or structural wood C24 – EN 14081
Drilling capacity:	$\Sigma t_i \leq 2 \times 1,00 \text{ mm}$
<b>Timber substructures</b>	
For timber structures performance assessed with:	
$M_{y,Rk} = 4,39 \text{ Nm}$	
$f_{ax,k} = 13,346 \text{ N/mm}^2$ for $t_{ef} \geq 19,2 \text{ mm}$

If both components I and II are made of S320GD the values  $V_{R,k}$  may be increased by 8,3%  
If both components I and II are made of S350GD the values  $V_{R,k}$  may be increased by 16,6%

<b>Fastening screws for metal members and sheeting</b>	<b>Annex 26</b>
Self-drilling screws ESDS-3-SP 4.8xL with hexagon head and washer S14	of European Technical Assessment ETA-16/0739

<u>Materials</u>	
Fastener:	carbon steel – SAE1022, quenched, tempered and coated: galvanized (12 µm)
Washer:	Z16 – carbon steel washer with EPDM ring
Component I:	S280GD, S320GD or S350GD – EN 10326
Component II:	S280GD, S320GD or S350GD – EN 10326
Drilling capacity:	$\Sigma t_i \leq 3,00 \text{ mm}$
<u>Timber substructures</u>	
No performance assessed	

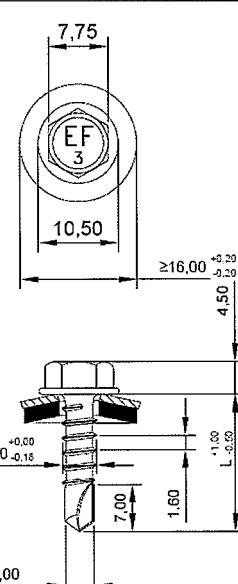

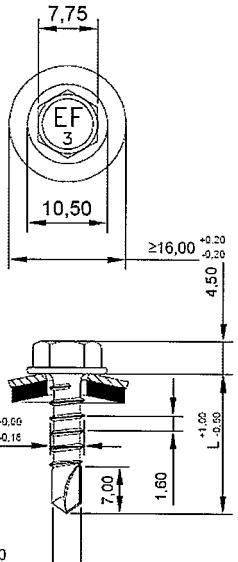

The technical drawings illustrate the fastener assembly and its installation dimensions. The top drawing shows a side view of the fastener with dimensions: height 7,75, shoulder diameter 10,50, and a total length of ≥16,00 with a tolerance range of ±0,20. The bottom drawing shows the fastener installed in a timber substructure, with dimensions: a shoulder height of 4,150, a shoulder width of 4,00, a shoulder thickness of 1,60, and a total height of 7,00. The shoulder width has a tolerance range of -0,00 to +0,10.

<b>Fastening screws for metal members and sheeting</b>	<b>Annex 35</b>
Self-drilling screws ESDS-3-B 4.8xL with hexagon head and washer S16	of European Technical Assessment ETA-16/0739

<u>Materials</u>				
Fastener:	stainless steel – SAE304 (bi-metal)			
Washer:	S16 – stainless steel washer with EPDM ring			
Saddle washer:	ESW made of aluminum			
Component I:	S280GD, S320GD or S350GD – EN 10326			
Component II:	S280GD, S320GD or S350GD – EN 10326			
Drilling capacity:	$\Sigma t_i \leq 3,00 \text{ mm}$			
<u>Timber substructures</u>				
No performance assessed

	 <p>The technical drawing illustrates a fastener assembly. At the top, a circular washer is shown with a diameter of 7,75 and a thickness of 1,10. The text 'EF 5' is printed on the washer. Below the washer, a threaded bolt is shown with a total length of 5,45. The bolt has a shoulder diameter of 5,50 and a thread diameter of 4,80. The distance from the bottom of the bolt to the top of the washer is 8,00. The distance from the top of the washer to the top of the head is 1,80. The head has a height of 1,10 and a diameter of 5,45.</p>

<u>Timber substructures</u>	
No performance assessed	

The technical drawings illustrate two views of a fastener assembly. The top view shows a cross-section of the fastener head with a diameter of 7,75 mm, a shoulder height of 11,00 mm, and a total height of ≥16,00 mm with a tolerance of +0,20/-0,20 mm. The bottom view shows a side cross-section of the fastener, washer, and bolt, with a total length L of 12,50 mm, a shoulder height of 5,05 mm, and a head height of 1,10 mm. The washer thickness is 5,50 mm with a tolerance of -0,20/-0,20 mm. The bolt diameter is 5,45 mm.

**Fastening screws for metal members and sheeting**

Self-drilling screws ESDS-WH-2-P 4.2xL with flat head

**Annex 130**

of European  
Technical Assessment  
ETA-16/0739

### **Determination of design values**

#### **1. Determination of Design Shear Resistance**

The determination of the design values of the shear resistance depends on the type of supporting substructure.

For Metal Substructures the following applies:

The design values  $V_{R,d}$  of the shear resistance are the characteristic values of the shear resistance divided by the recommended partial safety factor  $\gamma_M = 1,33$ . The recommended partial safety factor  $\gamma_M$  should be used in cases where no value is given in national regulations of the Member State where the fastening screws are used.

For Timber Substructures the following applies:

The design values  $V_{R,d}$  of the shear resistance are the characteristic values of the shear resistance multiplied by  $k_{mod}$  according to EN 1995-1-1, Table 3.1, and divided by the recommended partial safety factor  $\gamma_M = 1,33$ . If failure of the metal component with the thickness  $t_i$  and not failure of the timber substructure is the relevant failure mode then  $k_{mod} = 1,0$ .

The recommended partial safety factor  $\gamma_M$  should be used in cases where no value is given in national regulations of the Member State where the fastening screws are used.

#### **2. Determination of Design Pull-through, Pull-out and Tension Resistance**

The design values of the pull-through resistance are the characteristic values of the pull-through resistance divided by the recommended partial safety factor  $\gamma_M = 1,33$ . The recommended partial safety factor  $\gamma_M$  should be used in cases where no value is given in national regulations of the Member State where the fastening screws are used.

The determination of the design values of the pull-out resistance depends on the type of substructure.

For Metal Substructures the following applies:

The design values of the pull-out resistance are the characteristic values of the pull-out resistance divided by the recommended partial safety factor  $\gamma_M = 1,33$ . The recommended partial safety factor  $\gamma_M$  should be used in cases where no value is given in national regulations of the Member State where the fastening screws are used.

For Timber Substructures the following applies:

The design values of the pull-out resistance are the characteristic values of the pull-out resistance multiplied by  $k_{mod}$  according to EN 1995-1-1, Table 3.1, and divided by the recommended partial safety factor  $\gamma_M = 1,33$ . The recommended partial safety factor  $\gamma_M$  should be used in cases where no value is given in national regulations of the Member State where the fastening screws are used.

The design tension resistance  $N_{R,d}$  is the minimum value of the design values of either pull-through resistance or relevant pull-out resistance for the corresponding connection.

#### **3. Design Resistance in case of combined Tension and Shear Forces (interaction)**

In case of combined tension and shear forces the linear interaction formula according to EN 1993-1-3, section 8.3 (8) or EN 1999-1-4, section 8.1 (7) should be taken into account.
